

Analysis zeugenhouderij: Amazing impact by Mama-VIT

DEURNE – From an analysis of the yearly results of the company Boerenbond Deurne, it showed that the feed additive Mama-VIT (300 gr Mycoad AZ + 150 gr Citrex) had a positive impact on the number of born and weaned piglets per litter. The increase in living born and weaned piglets per litter at Boerenbond Deurne was never so big as in 2008 (see graph).

For the application of this feed additive, the difference in the previous four years was constantly 0,2 living and 0,1 weaning per litter higher than the rural figures of Agrovision. Both the live born as the weaned piglets per litter increased with 0.2 piglet per litter. With a net revenue of EUR 30,== per piglet (revenue piglet minus feeding- and treatment costs) this means a balance improvement of EUR 6,== per litter and more than EUR 14,== per sow per year. This amply compensates the extra investment in feeding costs for the feed additive.

The data are originating from more than 100.000 litters per year, which is more than 500.000 litters during the last five years.

TO All:

Last year we had already information you about Boerenbond Deurne that they had broken records in piglets born / sow and # of weaned piglets / sow not only compare to their previous history but also compare to all the rest of farms in Holland (Agrovision NL). They are using a combination of: 300 gr Mycoad AZ + 150 gr Citrex powder in ALL FEEDS. This year they have broken records again to the already excellent parameters. They consume 12,000 kg of citrex / year.

You can see the information in the internet in Dutch going to the link <http://www.varkensbedrijf.nl/Index.aspx?id=2868>

Boerenbond Deurne, record number of results collected by Agro Monitor!

Deurne – with 45,162 sows from 136 companies and a record number of finishers 1,007,019 from 210 companies Deurne collected more results through its Agro Monitor. Clearly against the national trend because in Agrovision were approximately 10% fewer companies with results. Agro Monitor is the system that allows farmers of Boerenbond Deurne to compare their results monthly with national figures of Agrovision.

Sows 2009: 1.1 piglets more weaned / sow / year and 6% higher feed gain. Never before has the gap between rural Agrovision and Boerenbond Deurne 1.1 weaned piglets! This difference is almost completely formed by 0.5 piglets born alive and weaned 0.5 more per litter. The following is a summary of the key indicators:

Results 2009 sows

Key indicator	Agrovision – NL	CBD – average	CBD – 20% top class
Weaned piglets/ sow/year	27,2	28,3	30,3
Alive born per litter	13,1	13,6	13,9
Weaned piglets per litter	11,4	11,9	12,3
Feed cost per piglet (25kg)	€ 9,62	€ 9,29	€ 9,35
Feed cost per sow	€ 265	€ 261	€ 262
