

HIGHLY SPECIFIC. UNMATCHED SENSITIVITY.

No rapid Avian Influenza Type A detection product compares with *Flu* DETECT™ Avian Influenza Virus Type A Antigen Test Kit.

- Extremely high sensitivity to all Influenza A subtypes within 3 to 5 days post-infection
- Minimum detectability: $10^3 - 10^4$ EID₅₀/ml
- 1,000 times more sensitive than other commonly used tests

ANOTHER ESSENTIAL DIAGNOSTIC TOOL FROM SYNBIOTICS: PROFLOK® AIV PLUS ANTIBODY TEST KIT.

This highly specific screening test for the detection of antibody to AIV in chicken serum samples provides additional monitoring against acute decline in egg production, high mortality and economic losses associated with AIV infection.

- USDA approved
- Endorsed by NPIP as an approved AIV antibody test methodology
- Part of a comprehensive AIV monitoring protocol
- Monitor vaccine efficacy, timing and administration practices

SYNBIOTICS Corporation offers the broadest range of diagnostic test formats in the animal health industry.

For more information on *Flu* DETECT™ Avian Influenza Virus Type A Antigen Test Kit or ProFLOK® AIV Plus Antibody Test Kit, visit www.synbiotics.com.

Easy to use. Can be used on the farm or in the laboratory

Kit contains swabs, tubes, test strips and reagents necessary to test 20 samples economically
